Complete concordance of lexical diversity:
Determination of all lexical items (types) and their frequencies
from the normalized corpus by N-gram analysis.
(<http://en.wikipedia.org/wiki/N-gram>)

*

*

The maximum for N was found for this work as 57.

*

*

*

The normalization of the body was carried out by removal of all
spaces, punctuation, numbers, line- and page breaks,
wherein one or more special characters in a row,
are replaced by one single space character.

*

*

Remarks:

*

*

Upper / lower case is considered to be identical.
The analysis is carried out 57... 2-gram, down.
N contains 2 type delimiting spaces.

*

*

The content of each unit (type) is not in any
way once again considered in a different type!
The entire corpus here is thus shown repetition free.

*

*

*

Subsequent list is sorted in descending order of type's length.
(Number in parentheses: occurrence * length).
